P-PSDB; AAE17136.

New isolated human kinase proteins and nucleic acids, useful as a major target for drug action and development, particularly for screening modulators of the kinase peptides.

Claim 4; Fig 1; 87pp; English.

AX The invention relates to human kinase proteins that are related to Grotein coupled receptor kinase subfamily. Human kinase gene is located CC protein coupled receptor kinase subfamily. Human kinase gene is located CC on chromosome 3. The kinase peptide and nucleic acid are useful in the corresponding protein subsetul as a major target for drug action and development, and is compositions. The peptide CC valuable to the field of pharmaceutical development to identify and CC valuable to the field of pharmaceutical development to identify and CC raise antibodies or to elicit an immune response, as a reagent in assays crase antibodies or to elicit an immune response, as a reagent in assays fluids and as markers for tissues in which the corresponding protein is CC fluids and as markers for tissues in which the corresponding protein stage of tissue differentiation or development or in a disease state). The CC of tissue differentiation or development or in a disease state). The CC disease or predisposition to disease mediated by the peptide. The nucleic CC disease or predisposition to disease mediated by the peptide. The nucleic acid molecules are useful for probes, primers, chemical intermediates and CC acid molecules are regulatory regions of the nucleic acid molecules and CC containing the gene regulatory regions of the nucleic acid molecules and CC for drug screening to identify compounds that modulate kinase nucleic for drug screening to identify compounds that modulate kinase nucleic acid expression. The present sequence is human kinase cDNA expressed in CC skins, germinal center B cells, colon, kidney and lung

Identifying compounds that alter inhibition of cone opsin kinase polypeptide activity for treating a conditions related to cone visual signaling, comprises mixing a compound with a cone opsin kinase and with an inhibitory polypeptide.

Example 4; Page 48-49; 61pp; English.

CC The present invention relates to novel human cone opsin kinase (G-protein CC coupled receptor kinase 7; GRK7) and their corresponding polynucleotides. CC alter the inhibition of GRK7 polypeptide activity which involves mixing a CC elect compound with GRK7 protein and an inhibition of GRK7 protein and an inhibition of GRK7 protein and continuous activity by the inhibitory polypeptide. GRK7 sequences are useful for CC detaining conditions related to cone visual signalling (e.g., night CC blindness, colour blindness, difficulty with colour vision, visual sensitivity, visual resolution or in adapting to changes in light CC intensity, Oguchi disease or dominant congenital stationary night CC depression, anxiety, mental fogginess, menory loss, headaches, fatigue, CC or jet lag). Agonists of GRK7 polypeptide activity may be used to treat CC activity is beneficial, e.g., decreased colour sensitivity or other cone CC photoreceptor-mediated diseases. The GRK7 proteins are also useful in the

The gene and its encoded protein are useful for diagnosis of and screening for drugs for heart diseases, cancers and omentopathy. The current sequence represents the human RGSNO9 encoding DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1191 BP; 274 A; 320 C; 363 G; 234 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 6; Page 81-82; 96pp; Japanese.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present cDNA sequence encodes a human G-protein coupled receptor kinase (GRK), also designated NHP (novel human protein) in the specification, which is claimed in the invention. The invention comprises specification, which is claimed in the invention. The invention comprises novel human nucleotide and protein sequences which have similarity to G-protein coupled receptor kinases. Oligonucleotides derived from the nucleotides of the invention are useful as hybridisation probes for nucleotides of the invention are useful as hybridisation probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polynucleotides encoding human proteins that share sequence similarity with animal kinases e.g. G-protein coupled receptor kinases, useful for drug screening, diagnosis and in gene therapy of biological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 2001-570872/64.

> from the original library and normalized by hybridization to biotinylated driver (prepared from the same library by PCR) to Cot-omega of 11. After removal of hybrids and excess driver by streptavidin sepharose chromatography, the ss-phagemids were made double stranded and electroporated into Top-10 Fr. Original library contruction by Bruce Blumberg (Blumberg et al., 1991 Science 253, 194-196; Hawlet et al., 1995, Genes Dev. 9, 2923-2935). Normalized by Jihwan Song (Song, Cho and Blumberg, unpublished). Note: This is a Xenopus Gene Collection (XGC) library."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
